Custom Applications and Integrations

IMPLEMENT AND INTEGRATE THE RIGHT SOLUTIONS WHILE MAINTAINING COST

Seamless Workflow	Custom Approach	Greater Efficiency	On-Demand Visibility
Data movement from one location, platform, or technology to another with ease	Application development based on what you need and how you need it	Faster and more accurate technology that performs 24/7	Immediate and simple access to all of your enterprise data

Challenges We Address

Throughout all enterprise technology solutions there are a multitude of different platforms, vendors, hardware implementations, data storage techniques, and communication protocols. In addition, many of these solutions are legacy in nature – they may be custom built by resources no longer available, proprietary offerings from third-party vendors, or inaccessible except through the use of programmatic interfaces like APIs, SDKs, and frameworks. Often, systems don't easily 'talk' to one another, legacy software can't be upgraded, or they are simply no longer supported. As electronically stored information (ESI) continues to grow in volume and the data becomes more rich and dynamic, it's easy to feel left behind or struggle to keep up. Technology needs can quickly add complicated procedures, arduous workflows, and multi-step manual processes. All these challenges elevate risk and spend by increasing the number of touch points and creating many opportunities for error. This creates the need to hire additional staff such as Developers, Project Managers, and Product Managers. External vendors and contractors can also be employed; however, it's nearly impossible to find someone who not only understands the technical needs but is also familiar with ediscovery and forensically sound workflows and methodologies.

Benefits We Provide

Using a fresh approach with decades of experience in ediscovery, automation, compliance, IT, information governance, operations, risk management, forensics, investigations, and development, Lighthouse brings the best people, tools, and practices to clients. Whether it requires reverse engineering of a legacy product, working directly with a third-party provider, or collaborating with one of our global partners, Lighthouse will deploy the right solution while keeping costs, future requirements, and scalability in mind. Lighthouse can approach the solution by:

1. Creating tools and services that run in the background

2. Designing interfaces to provide more control and on-demand visibility of your data

3. Taking on the day-to-day lift

By removing redundant manual steps and employing automation, costs can quickly be recovered and risk easily mitigated.

LIGHTHOUSE

- **System Integration -** Our team will work to ensure your systems work seamlessly with one another while focusing on quality, cost, and speed. This includes local, cloud, remote, virtual, legacy, and proprietary systems.

- **Custom Applications, Tools, Interfaces, and Reporting -** Lighthouse experts can build software the way you want it, specially designed and developed to work with personnel, systems, and business-specific workflows.

- **Automation (Including Workflows) -** The Advisory Services team will analyze your business processes and implement the technology necessary to automate manual steps helping to control costs, quality, and throughput.

- **Data Migration, Synchronization, and ETL -** Our experts can design and deploy applications to move or synchronize data from one place or system to another to ensure efficient system cooperation. During the process, we'll work with you to monitor the resources being used on your systems and network.

Summary

By partnering with Lighthouse, we can quickly take the complexity and frustration out of your everyday processes. In the fast-paced industry of litigation and ediscovery, we can help you spend more time on your case and less on your data and processes.

About Lighthouse

Lighthouse provides software and services to manage the increasingly complex landscape of enterprise data for compliance and legal teams. Lighthouse leads by developing proprietary technology that integrates with industry-leading third-party software, automating workflows, and creating an easy-to-use, end-to-end platform. Lighthouse also delivers unique proprietary applications and advisory services that are highly valuable for large, complex matters, and a new SaaS platform designed for in-house teams. Whether reacting to incidents like litigation or governmental investigations, or designing programs to proactively minimize the potential for future incidents, Lighthouse partners with multinational industry leaders, top global law firms, and the world's leading software provider as a channel partner.

Connect with us to see how Lighthouse can best support you.
